

Phase 1: Workflow Audit

Task Description	AI Classification	One-Line Rationale
Drafting weekly team status emails	Delegate with review	AI generates the structure quickly, but I must verify project metrics before sending.
Writing core backend database logic	Just me	Crucial for security and performance; AI hallucination risks here are too dangerous.
Brainstorming marketing copy options	Collaborate with AI	AI excels at rapid ideation, which I then refine to match our specific brand voice.
Logging daily billable client hours	Fully automate	A simple Zapier script can push calendar events directly into the tracking spreadsheet.
Reviewing complex legal contracts	Just me	AI misses subtle legal liabilities; human expert eyes are mandatory for risk management.
Summarizing 50-page industry reports	Delegate with review	Claude extracts the core themes in seconds, but I cross-check key statistics.
Debugging cryptic compiler errors	Collaborate with AI	I feed the error code to ChatGPT to get instant context, then manually apply the fix.
Sorting and labeling inbound support emails	Fully automate	Auto-categorization based on keywords routes tickets to the right inbox instantly.
Designing high-level product architecture	Just me	Requires deep proprietary knowledge and long-term strategic vision AI lacks.
Creating presentation slide outlines	Collaborate with AI	We iterate on the narrative flow together before I build the actual visual deck.
Translating user feedback into feature lists	Delegate with review	AI groups raw feedback into feature buckets well, but I must prioritize them.
Formatting raw CSV data for weekly reports	Fully automate	Python scripts run on a timer to clean messy strings without human intervention.

Phase 2: Claude Project Configuration

To fulfill the screenshot deliverable, set up your workspace inside the **Claude interface** using this optimized structural framework:

1. Project Title

- `AI Fluency Workshop: My Core Workflow`

2. Custom Instructions (System Prompt)

Who I Am: I am a professional managing software development, client reporting, and team coordination.

Tone Preferences: Professional, direct, highly analytical, and concise. Avoid conversational fluff, pleasantries, or emojis.

Current Goals: I am optimizing my weekly workflow to offload repetitive tasks to AI while maintaining strict quality control over security-critical code and legal reviews.

3. Uploaded Knowledge Files

- `weekly_schedule_template.pdf` (Your typical week structure)
 - `brand_voice_guidelines.md` (Your tone and style guide)
-

Phase 3: Target Tasks & Success Definitions

These three specific tasks are selected for reuse in modules FL-02 through FL-04.

Task 1: Industry Report Summarization

- **What "Done Well" Means:** The AI reduces a 50-page PDF into a 1-page bulleted brief that captures all major regulatory shifts, highlights 100% of mentioned revenue metrics, and flags exactly 3 actionable threats to our business model without hallucinating numbers.

Task 2: Brainstorming Marketing Copy

- **What "Done Well" Means:** The collaboration yields a list of 15 unique headline variations across 3 distinct emotional hooks (curiosity, urgency, benefit-driven), where at least 5 variants strictly adhere to our 60-character length constraint.

Task 3: Coding Cryptic Debugging

- **What "Done Well" Means:** ChatGPT identifies the root cause of an obscure stack trace error within 2 prompts and provides a working refactored code snippet that passes local integration testing on the first try without breaking existing dependencies.

Phase 4: Toolkit Verification Checklist

Ensure you have completed these administrative steps to pass the evaluation:

- **ChatGPT Account:** Created and accessible.
- **Claude Account:** Created with your project built out using the instructions above.
- **Anthropic Academy:** Enrolled in *AI Fluency: Framework & Foundations* with Module 1 marked as 100% complete.
